OUR MISSION

The **DMC** is the nation's annual forum for enhancing and leveraging the efforts of engineers, managers, technology leaders, scientists, and policy makers across the defense manufacturing industrial base. Leaders and manufacturing subject matter experts from government, industry, and academia exchange information and perspectives on defense manufacturing policies, strategic direction, best practices, funding opportunities, and the latest manufacturing innovations that will benefit our Warfighters.

Attendees and Exhibitors will have opportunities to interact and exchange ideas with specialists from government, industry, and academia, exchange views and ideas to strengthen our production capabilities, and meet with technical experts. You will experience state of the art technologies that can be applied to parts and material management at the training sessions and the exhibit hall.

The diverse range of attendees include industry and government leaders to working-level manufacturing-oriented engineers, scientists, and business practice/policy makers and include technology implementers, system designers, project managers, and representatives of the Warfighters.

DMC is jointly conducted by the Joint Defense Manufacturing Technology Panel (JDMTP) and coordinated through the event organizer, ARCTOS. The JDMTP, executed under the authorities outlined in title 10 of U.S. Code § 4842 serves to ensure coordination and collaboration across the Department of Defense Manufacturing Technology (DoD ManTech) Program. The service and agency ManTech programs primary purpose is to further the national security objectives outlined in title 10 of U.S. Code § 4841.

DMC provides you with current and relevant information for successful collaboration to secure the defense industrial base supply chain and support our Nation to any threats, current and in the future, by identifying challenges and solutions to our mission.
