

#### DAF Outreach Session:

The Department of the Air Force Manufacturing Technology program's major product areas are Hypersonic Strike Systems, Autonomous Collaborative Systems, Networked Command, Control and Communications, Advanced Concepts in support of legacy and future programs of record, and Space Systems.

For this session, we will once again offer short one-on-one opportunities to discuss gaps, trends, and ideas with these product area leads, as well as with our thought leaders in advanced manufacturing technologies areas such as additive manufacturing and robotics, and emerging manufacturing technologies, such as biomanufacturing and quantum.

There will be a sign-up sheet in the DAF ManTech booth with available time slots during the session.
